

# COMMERCIAL FERTILIZERS

Special Inspection, Feb., 1974

Bulletin 746

March, 1974

Digitized by the Internet Archive  
in 2012 with funding from  
LYRASIS members and Sloan Foundation

Due to recent large increases in the price of fertilizer and talk about shortages, the Experiment Station conducted a special pre-season survey to check the claims of nitrogen content of products sold in Connecticut. The 69 samples which represent 21 manufacturers, were collected between February 13 and 23 by R. Richard Nichols, and were analyzed by William Glowa.

A comparison with the results of analyses for the past two years shows no significant trend. A table showing the results for the same manufacturers involved in the February sampling is below. The results will be published again in the 1974 fertilizer report which will be printed in 1975.

Gordon Hanna

<i>Samples</i>	<i>No. of N claims</i>	<i>No. of claims deficient</i>	<i>% deficient</i>	<i>Ave. % of claims</i>
Feb. 1974	69	8	11.8	105
